## Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1-23. (Canceled). (Currently Amended) Microbattery eemprising, in the form of thin layers, 24. comprising: at least a first electrode formed as a then layer and, the first electrode consisting of a first active compound A<sub>x1</sub>T<sub>v1</sub>[PO<sub>4</sub>]<sub>z1</sub>B<sub>w1</sub>, in which a chemical element E selected from the group consisting of metals and carbon is dispersed in the first active compound, a second electrodes electrode between which formed as a thin layer, the second electrode consisting of a second active compound Ax T'y2[PO4]z2B'w2, in which a chemical element E' selected from the group consisting of metals and carbon is dispersed in the second active compound, and, wherein A in the first active compound and the second active compound is a same or different alkaline metal ion selected from the group consisting of lithium and sodium, wherein T in the first active compound and T' in the second active compound are each a same or different mixture of metallic ions comprising at least one transition metal ion selected from the group consistir g of titanium, vanadium, chromium, cobalt, nickel, manganese, iron, copper, niobium, mc lybdenum and tungsten, wherein B in the first active compound and B' in the second active compound are each a same or different chemical elernent selected from the group consisting

of sulphur, oxygen, fluorine and chlorine,

and the chemical elements Y'<sub>1</sub>, Y'<sub>2</sub>, Y'<sub>3</sub> and Y'<sub>4</sub> being selected from the group consisting of sulphur, oxygen, fluorine and chlorine, and

wherein the electrolyte further comprises the {rouping [X'Y'<sub>1</sub>Y'<sub>2</sub>Y'<sub>3</sub>Y'<sub>4</sub>] and the alkaline metal ion A selected from the group consisting of lithium and sodium.

- 25. 26. (Canceled)
- 27. (Previously Presented) Microbattery according to claim 24, wherein the electrolyte comprises nitrogen.
  - 28-31. (Canceled)
- 32. (Currently Amended) Microbattery according to claim 31 claim 24, wherein T and T' are identical.
- 33. (Currently Amended) Microbattery as cording to claim 31 claim 24, wherein E and E' are identical.
  - 34. 39. (Canceled)
- 40. (Previously Presented) Microbattery according to claim 24, wherein a first intermediate thin layer comprising the respective constituents of the first electrode and of the electrolyte is arranged between the first electrode and the electrolyte, the concentrations of the constituents of the first electrode and of constituents of the electrolyte varying respectively from 0 to 1 and from 1 to 0, from the electrolyte to the first electrode.
- 41. (Previously Presented) Microbattery according to claim 40, wherein a second intermediate thin layer comprising the respective constituents of the second electrode and of the electrolyte is arranged between the second electrode and the electrolyte, the concentrations of the constituents of the second electrode and of the electrolyte varying respectively from 0 to 1 and from 1 to 0, from the electrolyte to the second electrode.

- 43. (Previously Presented) Method for production of a microbattery according to claim 42, wherein a first intermediate thin layer is deposited on the second electrode by means of the first and second sputtering targets before deposition of the electrolyte.
- 44. (Previously Presented) Method for production of a microbattery according to claim 43, wherein a second intermediate thin layer is deposited on the electrolyte by means of the second and third sputtering targets before deposition of the first electrode.
- 45. (Previously Presented) Method for production of a microbattery according to claim 42, wherein the electrolyte is deposited in the resence of gaseous nitrogen.
- 46. (Previously Presented) Method for production of a microbattery according to claim 42, wherein first and second current collectors are deposited on the substrate, by cathode sputtering, before deposition of the second e ectrode.
- 47. (New) Method for production of a microbattery according to claim 42, wherein the first sputtering target consists of LiFePO<sub>4</sub>, in which is inserted platinum, the

second sputtering target consists of Li<sub>3</sub>PO<sub>4</sub>, and the third sputtering target consists of LiCoPO<sub>4</sub>, in which is inserted platinum.

48. (New) Microbattery comprising:

a first electrode formed by a thin layer consisting of the active compound LiFePO<sub>4</sub>, in which is inserted platinum,

a second electrode formed by a thin layer consisting of the active compound LiCoPO<sub>4</sub>, in which is inserted platinum, and

a solid electrolyte formed by a thin layer consisting of Li<sub>3</sub>PO<sub>4</sub>, the solid electrolyte being disposed between the first electrode and the second electrode.
